

# SCREENSAVER 3

**“Conceptualize how much I have disliked the Screensaver project.”**

I am following this idea due to the tedious process I have gone through in trying to make a successful project and for what will be my third time creating a new site version. As for the site's direction I plan to use screenshots of email communication that have been made between us, which will flash on the screen as well as a single word that will be timed with each screenshot to represent how I felt based on each email I received.

Hey Bobby,

Would you send me the PDF of your design proposals for your screensaver project?

Thanks!

12:49 PM (3 hours ago)

Hey Bobby,

Just following up on this, I've cc'd Monique and Nikki to keep them in the loop as well.

Thanks for the work you put into this new project and for going through this process. I passed your feedback about the PDF guidelines to Nikki.

I took a closer look at your resubmitted project, and I think there's still some work to do to make this a successful project for the class.

I wanted to explain the reasons behind this, so you know where I'm coming from. The purpose of the class (Studio and Lab) is to help you learn to both design and code on your own.

For the class to work, the projects that you make need to have original design and original code. To explain this more:

\* Original design means that a project is based on a new idea. The idea is something that has not been done before, as far as you know. It's also something that you have not made for a previous class. It's fresh work, done just for this class, not recycled at all.

\* Original code means code that was written from scratch. From scratch means starting with an empty, blank file and using your own thinking to figure out the logic. It's okay to use a reference like Stack Overflow, but you can only use the code samples you find there as rough guides. You can't base your project directly on one or several code samples, because even though it takes some work to put these together and make them work, it's not original enough to count as a successful project for the class.

The goal of all of this is to give you good practice at thinking through the design and code for every project on your own. If you work from things you find, other ideas or code, you don't have that chance to learn, and you'll leave the class without knowing the material that the class is meant to teach. Because this is a core class, it's important and core to the work you'll be doing in the Communication Design program.

I hope that's more clear, and I think this is something I will explain more at the beginning of the semester in the future.

Hi Bobby,

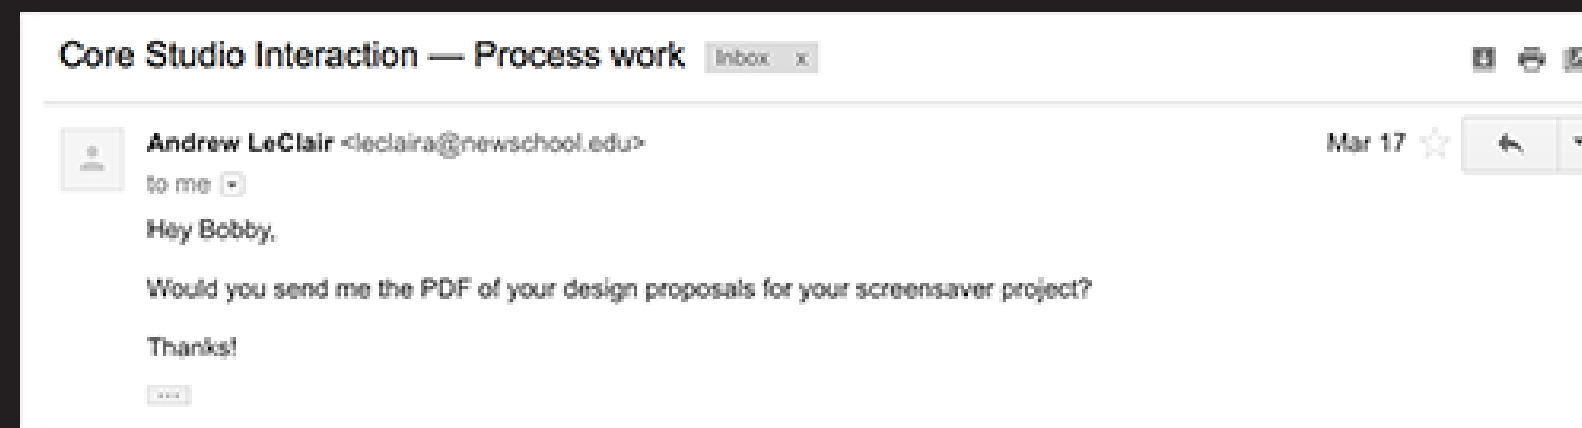

Thank you for making some time for us to meet and talk. I'm glad we'll have a chance to do this sooner rather than later. See you on Wednesday.

All the best,  
Andrew
